PERSONAL SUMMARY

I am a PhD candidate at the University of Oxford investigating processes of change in cognitive therapy for Posttraumatic Stress Disorder (PTSD). Testing the theoretical models underpinning cognitive therapy for PTSD has strengthened my understanding of the importance that clinical interventions are rooted in empirical science and continually evaluated and refined through research. I appreciate the importance of innovative research projects testing and evaluating technological advances in health care, particularly in clinical psychology. I value, advocate, and implement open science practices in my work. In addition to my research interests I am enjoying to contribute to open-source software tools that help to visualise and analyse data.
